*Illustrations provided on these instructions do not necessarily represent your device.

- 1 Cap Sheet**
clear, rigid sheet covering the protective film.
- 2 UltraTough® Protector**
film that protects your device
- 3 Back Liner**
white sheet protecting adhesive side of film

IMPORTANT: Follow the instructions carefully. There are two methods to install your protector: with or without the application gel. To apply using the application gel, follow application instructions with the blue circles. To apply without the application gel (dry apply), follow the instructions with the black circles.

WHICH METHOD IS BEST FOR ME?

GEL APPLICATION

The gel application method allows you to more easily position your protector and minimize bubbles. Although it requires about 30 minutes to dry before use, there will be significantly less haze than the dry method immediately after application. We recommend waiting overnight before putting it in your pocket; it will take up to 72 hours to completely cure.

DRY APPLICATION

The dry apply method offers a quicker application, though your protector cannot be repositioned once it is applied. As the adhesive cures, there will be a visible haze immediately following application, but should completely cure within 96 hours. Your device will be ready for use immediately after application, but we recommend waiting overnight before putting it in your pocket.

GEL APPLICATION DIRECTIONS

- 1** Remove the film from the white back liner. Using your finger, spread application gel over the entire sticky side of the film. Only a few drops of gel are needed. *Be very careful not to drop the film or let it come in contact with any contaminants.
- 2** Position the piece on the device, reposition by placing your fingers on the film and gliding it into the correct position. If you need to lift the film off the surface to remove air bubbles, simply re-gel the film before laying it back down.
- 3** Using a credit card covered with the provided cleaning cloth, squeegee from the middle to remove all bubbles and excess gel.
- 4** Carefully remove the cap sheet by pulling on the BodyGuardz tab and allow 30 minutes to dry before use. Application is complete. Any haziness will disappear over time.

DRY APPLICATION DIRECTIONS

- 1** With the film facing down, peel the white back liner down 1-1.5 inches from the top and create the liner, exposing the adhesive side of the film. Be careful not to touch the adhesive.
- 2** Position the film on the device, aligning it properly (use edges, buttons & camera to judge alignment). The fold will allow you to float the film in the exact spot before pressing down the exposed adhesive portion to your device. When it is aligned, press down the exposed adhesive portion.
- 3** Using a credit card, press down the remaining portion of the film, letting the back liner slip away. Rub the surface with card or cleaning cloth to smooth out any bubbles.
- 4** Let sit for 20 minutes, then carefully remove the cap sheet by pulling on the BodyGuardz tab. Application is complete. Any haziness will disappear over time.

PREPARATION

Turn your device off. Wash your hands. Clean your device with provided wet wipe and cleaning cloth.
